## ASSIGNMENT-4

Project Name	IoT Based Smart Crop Protection System For Agriculture
Team ID	PNT2022TMID15011

### Question1:

Write code and connections in work for ultrasonic sensor. Whenever distance is less than 100cms send "alert" to ibm cloud and display in device recent events.

## CODE:

```
1  #include <WiFi.h>//library for wifi
2  #include <PubSubClient.h>//library for MQTT
3
4
5  void callback(char* subscribetopic, byte* payload, unsigned int payloadLength);
6
7  //-----credentials of IBM Accounts-----
8
9  #define ORG "4hn0jp"//IBM ORGANITION ID

```

## OUTPUT:

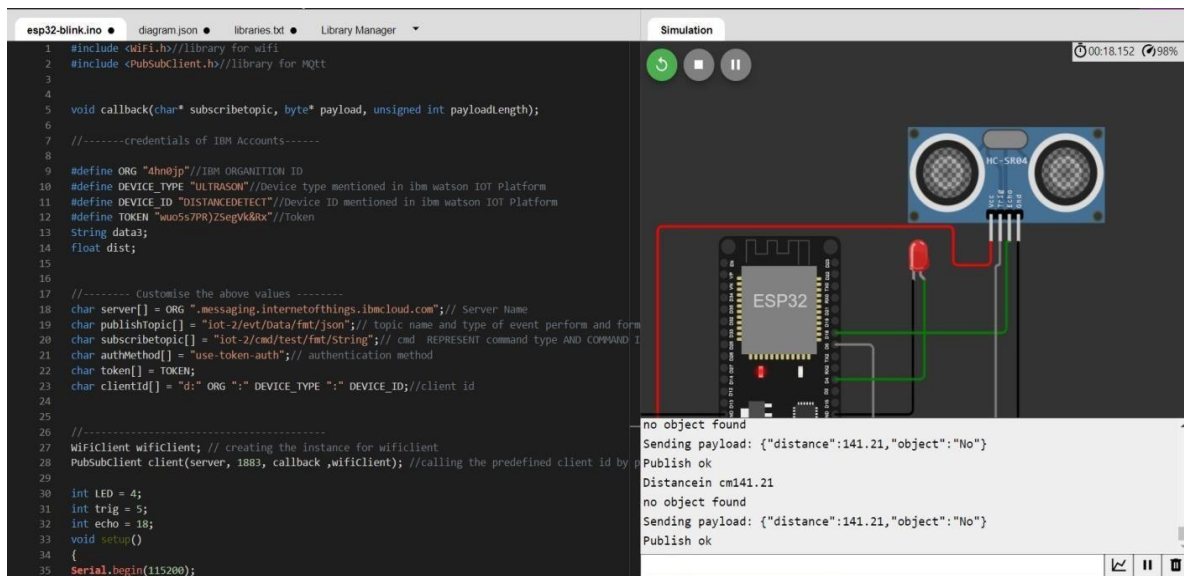

The screenshot shows the IBM Watson IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. A blue header bar contains the device name 'DISTANCEDETECT', its status 'Disconnected', type 'ULTRASON', and a timestamp 'Oct 20, 2022 9:46 AM'. Below this, there are tabs for 'Identity', 'Device Information', 'Recent Events' (which is selected), 'State', and 'Logs'. A message states: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this is a table with the following data:

Event	Value	Format	Last Received
Data	{\"distance\":141.21,\"object\":\"No\"}	json	a few seconds ago
Data	{\"distance\":141.21,\"object\":\"No\"}	json	a few seconds ago
Data	{\"distance\":141.21,\"object\":\"No\"}	json	a few seconds ago
Data	{\"distance\":141.18,\"object\":\"No\"}	json	a few seconds ago
Data	{\"distance\":141.2,\"object\":\"No\"}	json	a few seconds ago

At the bottom, there is a pagination bar showing 'Items per page: 50' and '1-2 of 2 items'. On the right side, there is a '1 of 1 page' indicator with navigation arrows.

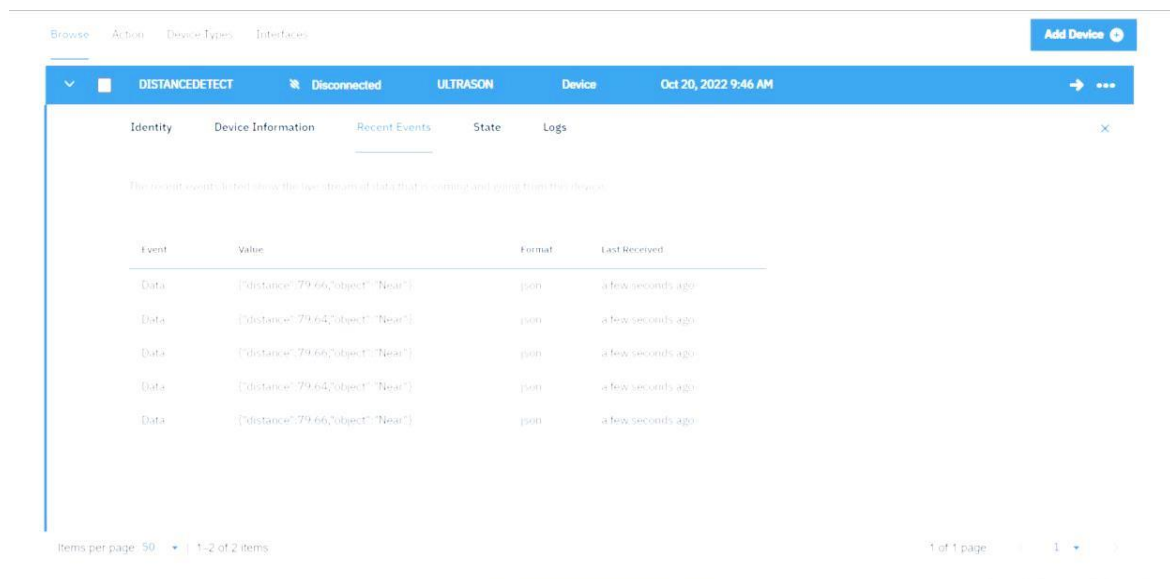

Data send to the IBM cloud device when the object is far

The screenshot shows the Arduino IDE with a code editor on the left and a simulation window on the right. The code is for an ESP32 device connected to an HC-SR04 ultrasonic sensor. The code includes comments for IBM Watson IoT Platform credentials and device information. The simulation window shows a 3D model of the ESP32 and the ultrasonic sensor. The output window shows the following messages:

```
no object found
Sending payload: {\"distance\":141.21,\"object\":\"No\"}
Publish ok
Distancein cm141.21
no object found
Sending payload: {\"distance\":141.21,\"object\":\"No\"}
Publish ok
```

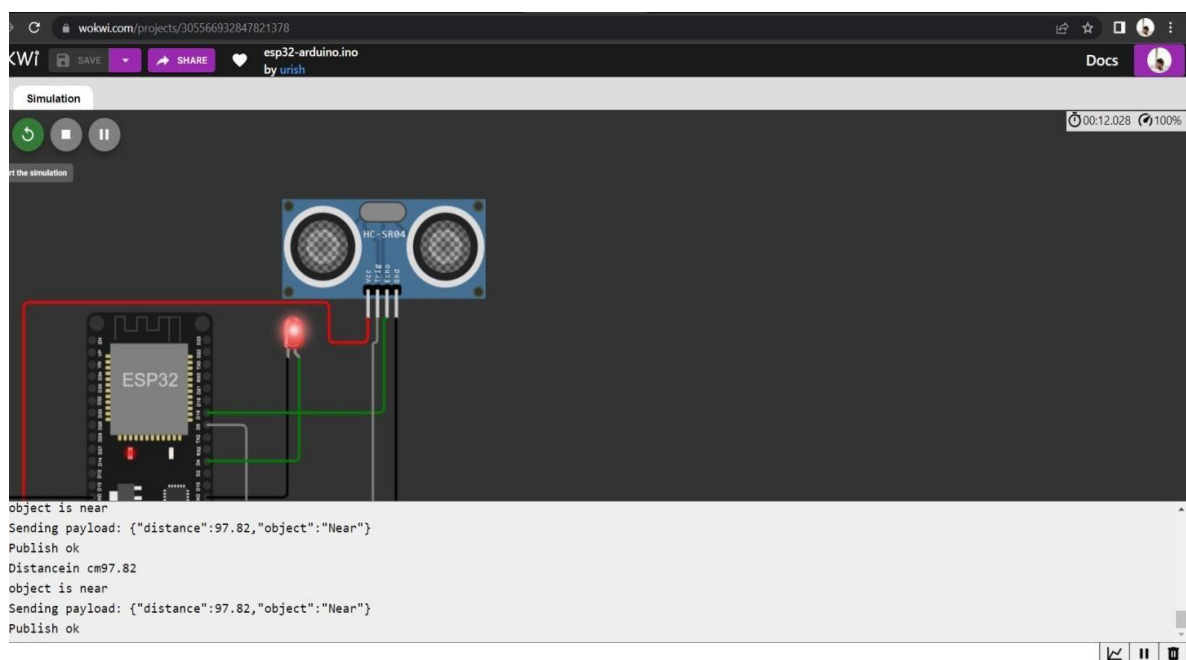

## Data sent to the IBM Cloud Device when the object is near

The screenshot shows the IBM Cloud IoT Platform interface for a device named 'DISTANCEDETECT'. The device is in a 'Disconnected' state. The 'Recent Events' tab is selected, displaying a table of events. The table has columns for 'Event', 'Value', 'Format', and 'Last Received'. There are five events listed, all with the value '{"distance":79.66,"object":"Near"}' and the format 'json'. The 'Last Received' column shows 'a few seconds ago' for each event. The interface also includes a top navigation bar with 'Browse', 'Action', 'Device Types', and 'Interfaces' tabs, and a 'Add Device' button. A bottom status bar shows 'Items per page: 50' and '1 of 1 page'.

Event	Value	Format	Last Received
Data	{"distance":79.66,"object":"Near"}	json	a few seconds ago
Data	{"distance":79.64,"object":"Near"}	json	a few seconds ago
Data	{"distance":79.66,"object":"Near"}	json	a few seconds ago
Data	{"distance":79.64,"object":"Near"}	json	a few seconds ago
Data	{"distance":79.66,"object":"Near"}	json	a few seconds ago

## When object is near to the ultrasonic sensor

The screenshot shows a Wokwi simulation of an ESP32 microcontroller connected to an HC-SR04 ultrasonic sensor. The sensor is connected to the ESP32 via a breadboard. The simulation is running, and the console output shows the following messages:

```
object is near
Sending payload: {"distance":97.82,"object":"Near"}
Publish ok
Distance in cm 97.82
object is near
Sending payload: {"distance":97.82,"object":"Near"}
Publish ok
```
